* i campioni possono essere eseguiti ovunque tranne nei casi in cui non c'è produzione in tal caso i campioni devono essere effettuati sul mercato (distribuzione-stoccaggio-mercati generali e non generali supermercati- grossi rivenditori)

esempio per pesche - pomodori - frumento e riso

regione deve prelevare tra 3 e 7 campioni ma almeno 3 campioni . Nelle colonne con i numeri dei campioni calcolati dai dati delle produzioni e consumo e con i numeri dei campioni calcolati con i dati al consumo e con i dati delle produzioni potrebbe prelevare al massimo 5 campioni sul mercato e al massimo 7 campioni alla produzione allora potrà effettuare 5 campioni sul mercato e 2 alla produzione oppure può prelevare tutto alla produzione oppurre tutto al commercio se non ha abbastanza risorse per effettuare 7 campioni , oppure può prelevare 4 campioni sul mercato e 3 alla produzione oppure ne preleva 2 sul mercato ed 1 alla produzione perché i dati riportati nelle colonne con il numero di campioni , sono numeri orientativi ed è data ampia liberta alla regione la scelta del luogo del prelievo che sceglieranno tenendo conto delle criticità regionali degli anni precedenti .

esempio per olio evo

se una regione, secondo il decreto del 23 dicembre 1992, deve prelevare 31 campioni di olio complessivamente, allora, siccome l'obiettivo per ciascuna regione è almeno il 50 %, la Regione /Provincia dovrà far prelevare almeno 16 campioni di olio vergine ed extra vergine di oliva
