The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Project Manager who signed this report.

Job Narrative
680-J30390-1 / SDG No. FLX012 (Termoli Italy)

Receipt

All samples were collected in Termoli, Italy and were shipped via international courier to TestAmerica in Savannah, Georgia. Due to international shipping restrictions, samples were sent without wet ice.

Except as noted below, all samples were received intact and in good condition. Samples for select parameters were subsampled and preserved in accordance with method requirements following receipt at the laboratory. All volatile samples were received preserved in hydrochloric acid.

Containers for Mineral Oil analysis (Method 8015) and total Dithiocarbabmates (Method 630) were received for sample TE-001-GW (680-30390-1) in the sample receipt . The remaining containers for this sample for all other parameters were received on September 20, 2007 preceding this receipt and logged under Job 680-30279 (SDG FLX011).

Method 8260B: The following sample(s) were received with headspace in the sample vial: TE-007-GW (680-30390-2), TE-015-GW-D (680-30390-5), TE-021-GW-D (680-30390-12), TE-022-GW (680-30390-13). There is a total of 6 vials for each ID: -2 (4 of 6 vials), -5 (3 of 6 vials), -12 (2 of 6 vials), and -13 (2 of 6 vials) contain headspace.

GC/MS VOA

Method 8260B: The trip blank associated with these samples contained a detect for benzene. The benzene hit was carryover from a previous sample, however only 1 vial was received therefore re-analysis was not possible.

Library searches for the top 15 tentatively identified compounds (TIC) were performed following each volatiles analysis.

No other analytical or quality issues were noted.

GC/MS Semi VOA

Method 8270: The following samples were diluted due to the abundance of target analytes: TE-013-GW (680-30390-8), TE-013-GW-D (680-30390-9), TE-015-GW (680-30390-4), TE-015-GW-D (680-30390-5), TE-024-GW (680-30390-17). Elevated reporting limits (RLs) are provided.

Method(s) 3520C, 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for five analytes to recover outside criteria for this method when a full list spike is utilized. The LCS associated with batch 86509 had two analytes outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Library searches for the top 15 tentatively identified compounds (TIC) were performed following each semivolatiles analysis.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

Tellurium was analyzed semi-quantitatively using internal calibration coefficients set in the instrument to the natural isotopic abundance for this analyte. All positive results have been flagged as estimated (flag J) due to the semi-quantitative nature of the analysis. Results are summarized on a spreadsheet provided within the body of the report.

No analytical or quality issues were noted in metals or Tellurium analysis.

General Chemistry

Method(s) 9034: Insufficient sample volume was provided to perform batch matrix spike/matrix spike duplicate (MS/MSD) for batch 86327

No other analytical or quality issues were noted.

Comments

No additional comments.
