The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Project Manager who signed this report.

Job Narrative
680-J30503-1 / SDG No. FLX018 (Termoli Italy)

Receipt

All samples were collected in Termoli, Italy and shipped via international courier to TestAmerica Inc. in Savannah, Georgia. Due to international shipping restrictions, samples were sent without wet ice.

Unless noted below, all samples were received intact and in good condition. Samples for select parameters were subsampled and preserved in accordance with method requirements following receipt at the laboratory. All volatile samples were received preserved in hydrochloric acid (aqueous) or in deionized water and methanol (soils).

Method(s) 8015B, 8260B: The following sample(s) was received with headspace in one or more sample vials: TE-025-GW (680-30503-2), TE-027-GW (680-30503-1), TE-029-GW (680-30503-6), TE-030-GW (680-30503-3), TE-032-GW (680-30503-4).

All other samples were received in good condition within temperature requirements.

GC/MS VOA

Library searches for the top 15 tentatively identified compounds (TIC) were performed following each volatiles analysis.

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 3520C, 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for five analytes to recover outside criteria for this method when a full list spike is utilized. The LCS associated with batch 86915 had two analytes outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Library searches for the top 15 tentatively identified compounds (TIC) were performed following each semivolatiles analysis.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

Tellurium was analyzed semi-quantitatively using internal calibration coefficients set in the instrument to the natural isotopic abundance for this analyte. All positive results have been flagged as estimated (flag J) due to the semi-quantitative nature of the analysis. Results are summarized on a spreadsheet provided within the body of the report.

No analytical or quality issues were noted.

General Chemistry

No analytical or quality issues were noted.

Comments

No additional comments.
