The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Project Manager who signed this report.

Job Narrative
680-J30446-1 / SDG No. FLX014 (Termoli Italy)

Receipt

All samples were collected in Termoli, Italy and shipped via international courier to TestAmerica Inc in Savannah, Georgia. due to international shipping restrictions, samples were sent without wet ice.

Except as noted below, all samples were received intact and in good condition. Samples for select parameters were subsampled and preserved in accordance with the method requirements following receipt at the laboratory. All volatile samples were received preserved in hydrochloric acid.

One amber glass container for semivolatiles analysis was received broken for TE-020-GW (680-30446-1).

GC/MS VOA

Library searches for the top 15 tentatively identified compounds (TIC) were performed following each volatiles analysis.

No analytical or quality issues were noted.

GC/MS Semi VOA

Method(s) 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for five analytes to recover outside criteria for this method when a full list spike is utilized. The LCS associated with batch 86620 had two analytes outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Method(s) 8270C: Surrogate recovery for the following sample was outside control limits: TE-020-GW (680-30446-1). Re-extraction was performed with concurring results. Both sets of data have been reported.

Method(s) 8270C: The following samples were diluted due to the abundance of target analytes: TE-017-GW (680-30446-4), TE-019-GW (680-30446-2). Elevated reporting limits (RLs) are provided.

Method(s) 8270C: A full list spike was utilized for this method. Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for five analytes to recover outside criteria for this method when a full list spike is utilized. The LCS associated with batch 87340 had two analytes outside control limits; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Library searches for the top 15 tentatively identified compounds (TIC) were performed following each semivolatiles analysis.

No other analytical or quality issues were noted.

GC VOA

No analytical or quality issues were noted.

GC Semi VOA

No analytical or quality issues were noted.

Metals

Tellurium was analyzed semi-quantitatively using internal calibration coefficients set in the instrument to the natural isotopic abundance for this analyte. All positive results have been flagged as estimated (flag J) due to the semi-quantitative nature of the analysis. Results are summarized on a spreadsheet provided in the body of the report.

No analytical or quality issues were noted in the analysis of metals or Tellurium.

General Chemistry

Method(s) 9034: Insufficient sample volume was provided to perform batch matrix spike/matrix spike duplicate (MS/MSD) and dup for batch 86616.

No other analytical or quality issues were noted.

Comments

No additional comments.

DATA REPORTING QUALIFIERS

Client: Solutia Inc.

Job Number: 680-30446-1

Sdg Number: FLX014

| Lab Section | Qualifier | Description |
|--------------------|------------------|---|
| GC/MS VOA | | |
| | B | Compound was found in the blank and sample. |
| | J | Indicates an Estimated Value for TICs |
| | U | Indicates the analyte was analyzed for but not detected. |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| | N | This flag indicates the presumptive evidence of a compound. |
| GC/MS Semi VOA | | |
| | J | Indicates an Estimated Value for TICs |
| | U | Indicates the analyte was analyzed for but not detected. |
| | * | LCS or LCSD exceeds the control limits |
| | J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| | H | Sample was prepped or analyzed beyond the specified holding time |
| | X | Surrogate exceeds the control limits |
| | D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| | A | The tentatively identified compound is a suspected aldol-condensation product. |
| | N | This flag indicates the presumptive evidence of a compound. |
| GC VOA | | |
| | U | Indicates the analyte was analyzed for but not detected. |
